

# NISE Net Online Workshop

Deepening and Extending Family Engagement and Learning Through Interactive Exhibits and Facilitated Hands-on Activities

*Tuesday, October 23, 2018*

***Welcome!***

**Today's presenters are:**

- **Ali Jackson**, Sciencenter
- **Marta Beyer**, Museum of Science
- **Elizabeth Andanen**, Oregon Museum of Science and Industry

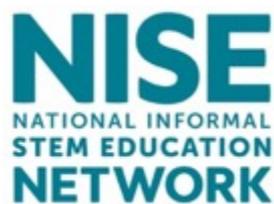

As we wait to get started with today's discussion, please:

**Introduce yourself!** Type your name, institution, and location into the Chat Box

**Questions?** Feel free to type your questions into the Chat Box at any time throughout the webinar or use the raise your hand function in the participants list and we'll unmute your microphone.

**Today's discussion will be recorded and shared on nisenet.org at: [nisenet.org/events/online-workshop](https://nisenet.org/events/online-workshop)**

**Let's Do Chemistry**

# THE NATIONAL INFORMAL STEM EDUCATION NETWORK

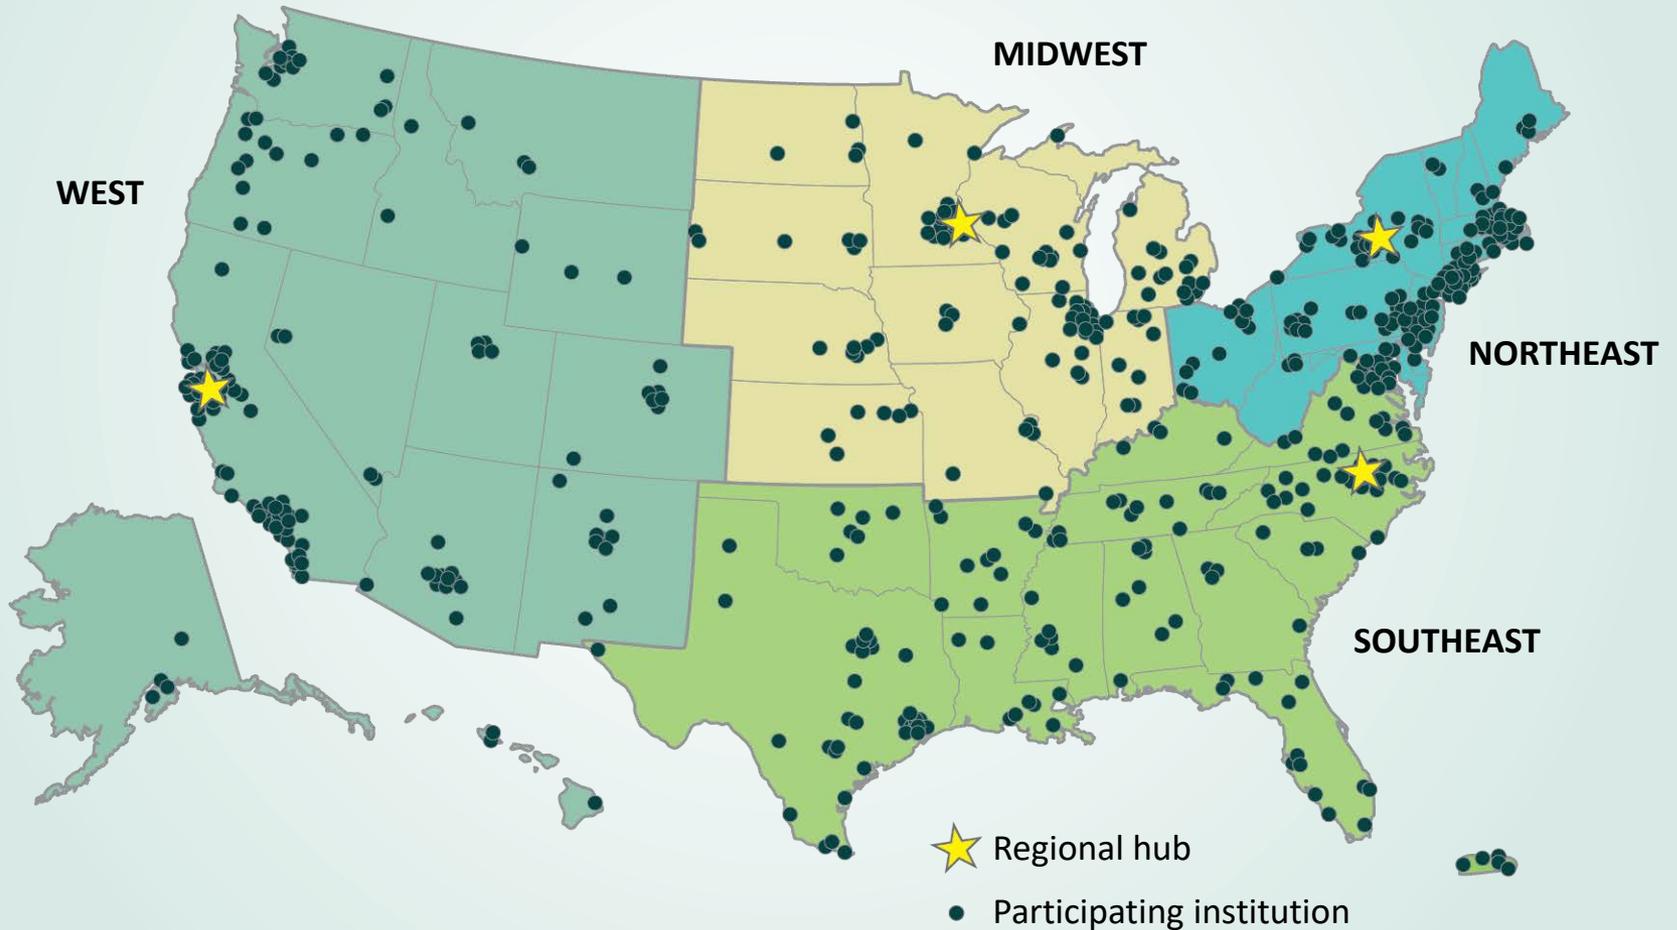

is a community  
of informal  
educators  
and scientists

# DEDICATED TO

supporting learning about science, technology, engineering, and math (STEM) across the United States.

# HUNDREDS OF ORGANIZATIONS

participate in NISE Network activities across the United States.

# Explore Science: Let's Do Chemistry

Design-based research methodology

Positive attitudes: *Interest, relevance, and self-efficacy*

# Design-based research

“Learning about learning chemistry”

**DBR:** Research methodology that conceives of an intervention; tests it iteratively in a natural setting; and uses the resulting data to improve the intervention and to create new theories and frameworks for learning.

# Design-based research

**TEAM:** NISE Network museum partners and American Chemical Society (ACS)

# Design-based research

**PROCESS:** At the beginning of the project, we had some ideas about designing experiences that would encourage positive attitudes about learning chemistry.

We are testing and refining those ideas by:

- Trying a variety of chemistry activities with visitors
- Studying educator-visitor-activity interactions through videotaping and interviews
- Talking about the data together
- Improving the activities and testing them again

# Defining chemistry for museum audiences

**Chemists** are scientists that study:

- what everything is made of
- how different materials behave and change
- how materials interact with each other and combine to make new things

**Chemistry** can help us understand the world around us and solve problems.

# Examples of chemistry for museum audiences

**Chemistry can help us answer questions like:**

- *What is air made of?*
- *What makes slime stretchy?*
- *What happens if you mix gum and chocolate?*
- *Is our water safe to drink?*

Our Explore Science activities investigate these questions, and many more!

# Learning goals for chemistry activities

**Develop positive attitudes toward chemistry** as a foundation for lifelong learning:

**Interest:** “Chemistry is interesting!”

**Relevance:** “Chemistry is connected to my life!”

**Self-efficacy:** “I can learn chemistry!”

# Interest

“Chemistry is interesting”

## INTEREST

...involves both *feeling* and *thinking*.

... is related to what the activity is *about* and how it connects to *everyday life*.

...is encouraged by activities that are *hands-on* and *allow for observation of phenomena*

# Relevance

“Chemistry is connected to my life!”

## RELEVANCE

...involves both personal *experience* and broader *applications*.

...involves connecting the activity to *everyday life* and showing how chemistry is *used*.

# Self-efficacy

“I can learn chemistry!”

## SELF-EFFICACY

...is having a sense of *confidence* and *capability* to learn and use chemistry.

...is encouraged by activities that are *easy to do and understand* and that are *hands-on*.

# Explore Science: Let's Do Chemistry

Activities are:

## More about...

Fun

Confidence

Excitement

Exploring together

Concrete connections

Guiding and asking

## Less about...

Facts

Comprehensive knowledge

Equations

Explaining to someone

Abstract ideas

Showing and talking

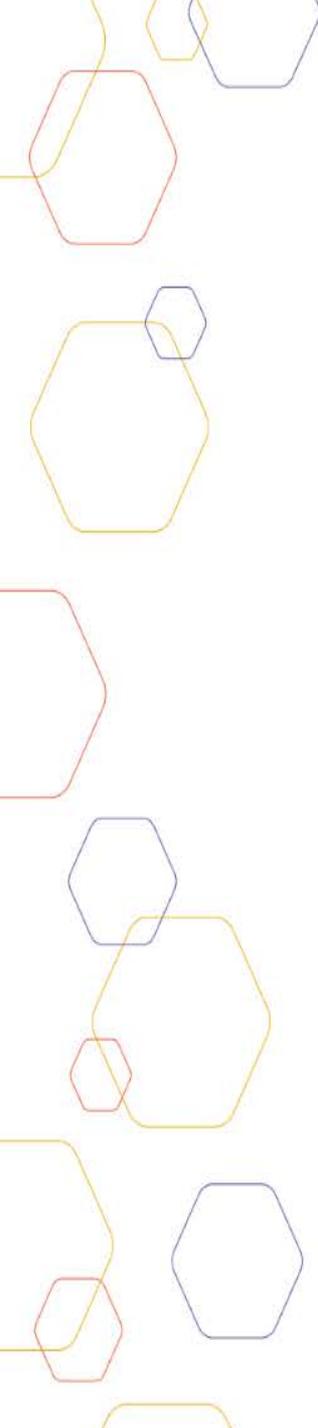

**And all about chemistry!**

# Explore Science: Let's Do Chemistry

**Positive attitudes start here!** Lifelong learning will continue at other times and places:

- **Interest** starts *now* but can carry into the *future*.
- **Relevance** starts *here* but can connect to *home, school, work, and community*.
- **Self-efficacy** starts with specific *activities* but can extend to *chemistry* more generally.

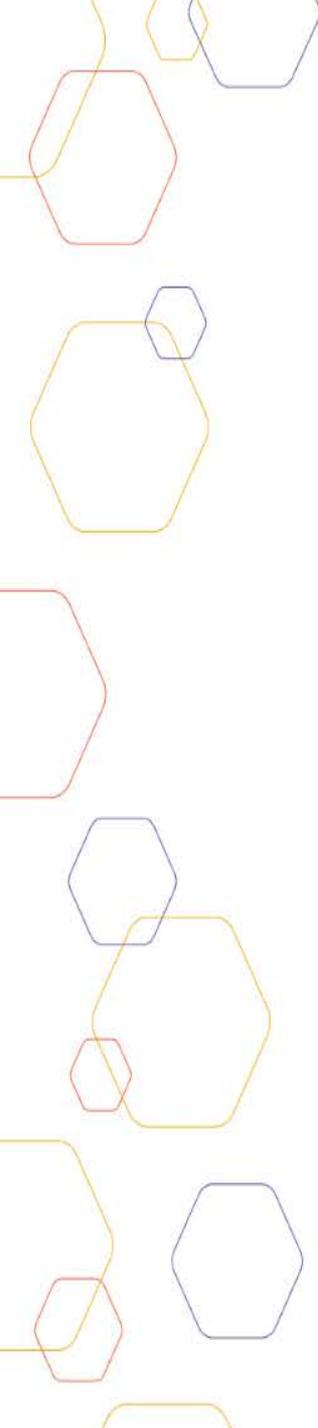

# ChemAttitudes Research Questions

**How should hands-on activities, events, and trainings be designed to increase visitors' positive attitudes about interest in, relevance of, and self-efficacy around chemistry?**

- How does activity content affect visitor attitudes about chemistry?
- How does activity format affect visitor attitudes about chemistry?
- How does activity facilitation affect visitor attitudes about chemistry?

# ChemAttitudes Research Questions

**How should hands-on activities, events, and trainings be designed to increase visitors' positive attitudes about interest in, relevance of, and self-efficacy around chemistry?**

- How does activity content affect visitor attitudes about chemistry?
- How does activity format affect visitor attitudes about chemistry?
- **How does activity facilitation affect visitor attitudes about chemistry?**

# Methods Related to Facilitation

- Collected video and interview data from 44 groups
  - 11 of the 15 activities represented
- Performed qualitative and quantitative analysis

# Defining Facilitation Strategies

- Codebook creation
  - Initial conversations with educators
  - Refined list of facilitation techniques
  - Reviewed literature
  - Adapted Exploratorium Learning & Facilitation Frameworks Spark, Sustain, Deepen (Facilitation Field Guide, N.D.)

# Adapting a framework

the tinkering studio

## Facilitation Field Guide

exploratorium

### Facilitation Goals

**Spark**  
initial interest

**Sustain**  
participation  
by following the  
learner's ideas

**Deepen**  
understanding  
through making  
connections

### Practices

- Welcome people and invite them to the space
- Introduce the activity and set the mood for the interaction

- Value tentative ideas, "mistakes," and wrong directions
- Support their process in moments of failure and frustration

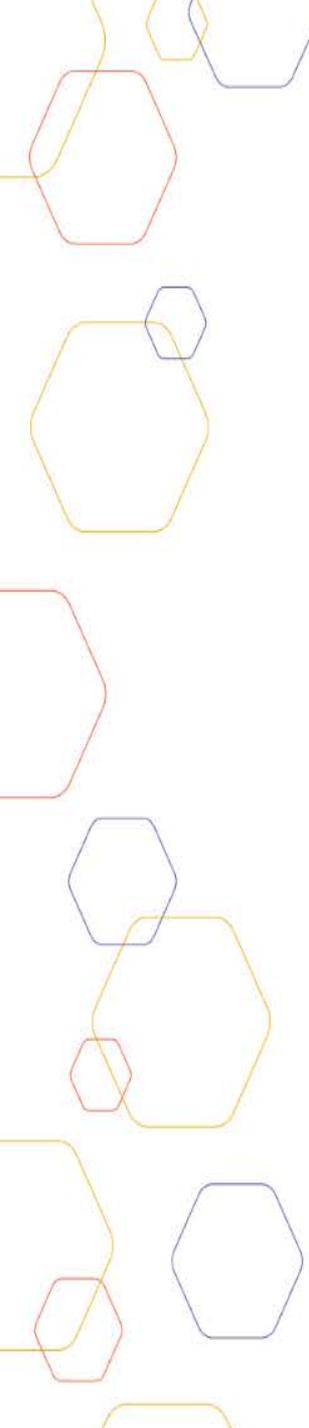

- Guide people to go a little bit further than they could on their own
- Surface connections between projects and links to outside learning experiences

### Techniques

- Smile and introduce yourself
- Orient learners to the available tools and materials
- Offer a place to start working
- Meet them at eye level when explaining or modeling
- Show examples that demonstrate a variety of thinking
- Suggest a prompt that generates possibilities

- Observe learners for a bit before jumping in
- Ask questions about their process
- Listen to their ideas
- Restate statements or questions
- Offer new materials or tools
- If you don't know the answer, work together
- Give learners suggestions instead of directions
- Show enthusiasm about their ideas

- Encourage people to look around the space for inspiration
- Point out shared goals around the room
- Offer technical terms only when relevant
- Let participants explain their thoughts and define the next steps
- Encourage risk-taking and experimentation
- Offer challenges that allow learners to go further down their own path
- Discuss how the experience might relate to outside interests
- Celebrate moments of wonder, surprise, and joy

# Facilitation Phases for ChemAttitudes

**Spark (Invite Participation)** includes techniques that **initiate** visitor engagement or participation.

**Sustain (Support Exploration)** includes techniques that maintain visitor engagement in the **process of participating in or “moving through”** the activity.

**Deepen (Deepen Understanding)** includes techniques that **encourage and support meaning-making.**

# Spark (Invite Participation)

includes techniques that **initiate visitor engagement or participation.**

**[ED]: . . . feeling sick does anyone tell you to take vitamin C or to drink orange juice?**

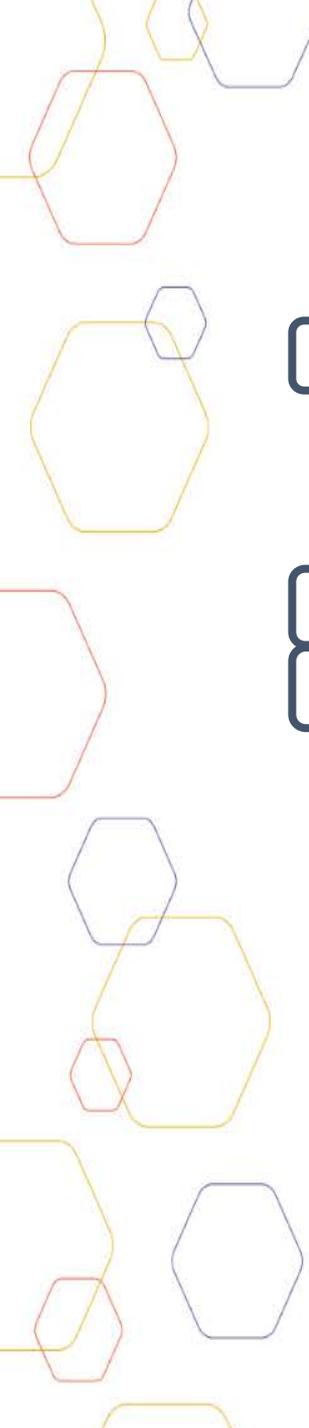

**[CF1]: Yeah.**

**[AF]: Yes.**

**[Ed]: Yeah, sometimes yeah.**

**[AF]: I always drink orange juice.**

**[Ed]: So, we are going to an activity to find out how much vitamin C is in different sorts of fruit juices, ok. And since there's three of you guys, I'm going to have you each test one fruit juice, ok. I'm going to have you share this and then I'm going to get one more.**

# Spark (Invite Participation)

includes techniques that **initiate visitor engagement or participation.**

- **Provide an introduction or activity overview**
- **Give broad directions or modeling for the use of tools**
- **Build rapport with visitors**
- **Learn about visitors' prior experience or understanding of chemistry**
- **Encourage all group members to participate, re-engage when attention wanes**
- **Transition between different portions of an activity or pursuing a new goal**
- **Give visitors the option to stop but the encouragement to stay.**

# Sustain (Support Exploration)

includes techniques that maintain visitor engagement in the process of participating in or “moving through” the activity.

[ED]: I will poke it in there. Now actually does one of you want to push it in? Just push it all the way to the bottom. Tell me if you see anything happening at all. Anybody notice anything?

[CF]: No.

[CM2]: I saw bubbles coming out.

[ED]: You saw bubbles coming out? Excellent.

[CM2]: It means there's still air in there.

[ED]: Ok, so there is air in there, yes.

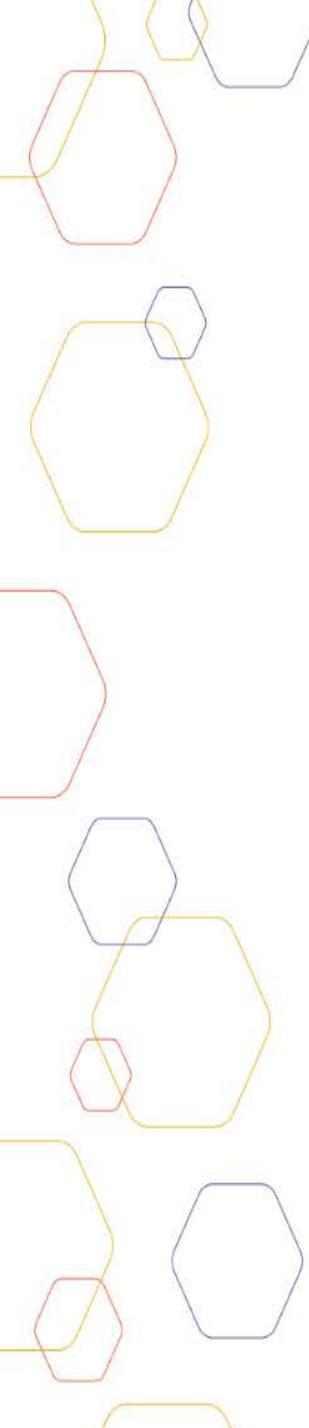

[CM2]: It means the water doesn't go in because there's air in there.

[ED]: Yes. So the water is not going in there. So, is the paper towel getting wet do you think?

[CM1]: No.

[CM2]: No

[ED]: Alright let's pull it out, and I will dry it out on the outside before we take a look at it. And, who wants to do the inspection? Go for it.

# Sustain (Support Exploration)

includes techniques that maintain visitor engagement in the **process of participating in or “moving through” the activity.**

- **Maintain the momentum of the activity**

- Offer positive reinforcement
- Provide basic information or vocabulary

- Provide step-by-step instructions

- **Support visitor inquiry**

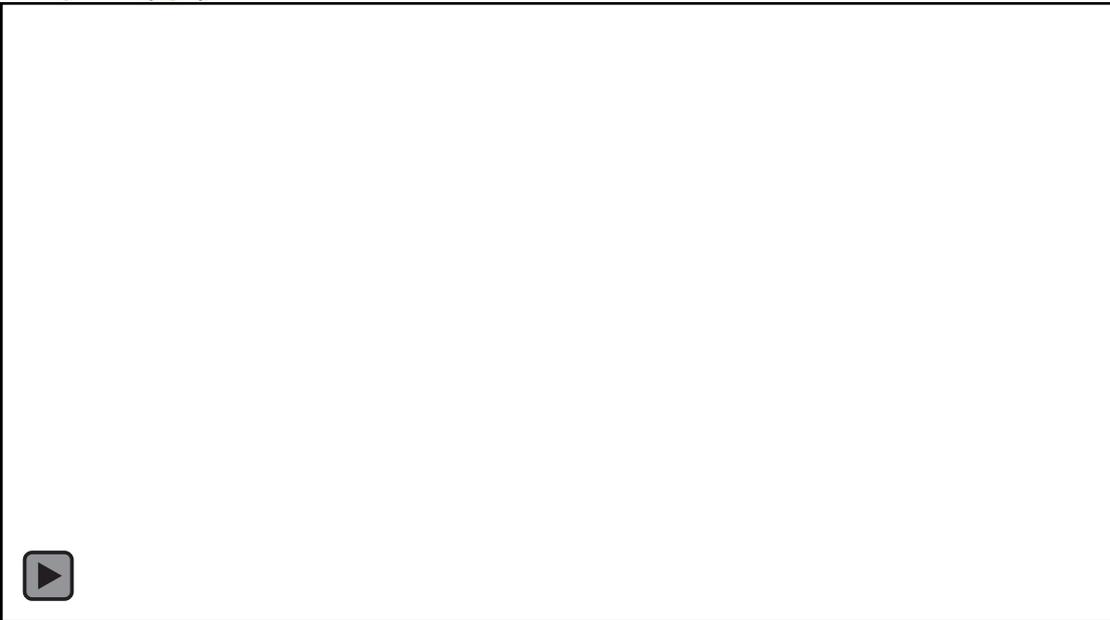

- Ask visitors to make observations

- Ask visitors to make predictions

- Encourage iteration and continued experimentation

# Deepen (Deepen Understanding)

includes techniques that **encourage and support meaning-making.**

**[ED]: Do you think a farmer would think that a pesticide is scary?**

[AF2]: No, they know what they're doing, they've studied their pesticides.

**[ED]: Studied it.**

[AF2]: Mhm.

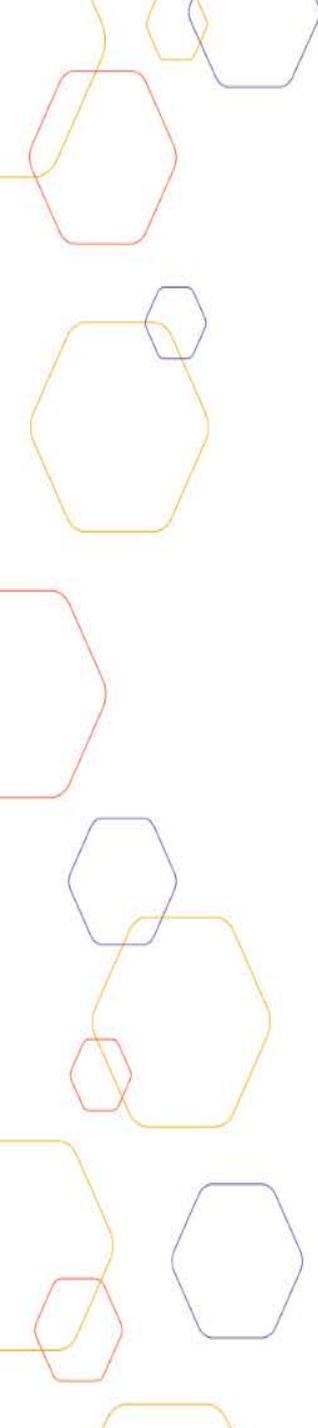

**[ED]: And what does a pesticide allow them to do?**

[AF2]: Well, it allows them to farm

**[ED]: Yeah, they can sell more of their crop.**

[CF]: Yeah.

**[ED]: So maybe the farmer might think it's a beneficial thing, but then some people might think it's a scary thing, the consumer maybe might think that I don't want to eat that.**

# Deepen (Deepen Understanding)

includes techniques that **encourage and support meaning-making.**

- **Foster reflective moments, to help visitors understand why or how something is happening**
- **Support meaning making by encouraging visitors to**
  - apply something they learned during the activity
  - explain why or how something is happening
- **Provide supplemental information to**
  - enhance the visitor's understanding
  - make connections outside the activity

# Initial Facilitation Findings

- Facilitators on average spend
  - **15%** of time **inviting participation**
  - **58%** of time **supporting exploration**
  - **22%** of time **deepening understanding**
  - **6%** of the time **other**
  
- **These techniques don't necessarily happen in a linear structure**

# Initial Facilitation Findings

- Positive correlations between strategies that:
  - **Support exploration** and learners **increasing their sense of self-efficacy**
  - **Deepen understanding** and learners **increasing their sense of relevance of chemistry**
- Facilitation strategies are particularly helpful in increasing positive attitudes toward chemistry for participants with **little/no chemistry experiences**

# Research Next Steps

- Additional video data analysis
- More data collection
  - Gathering feedback from facilitators at National Chemistry Week 2018

# Explore Science: Let's Do Chemistry

## Professional Resources

- Open me first
- Guides
- Training resources
- Safety supplies
- American Chemical Society publications

## Public engagement materials

- Welcome letter + kit contents
- Event activities
- Longer program
- Posters

# Nature of Dye

EXPLORE SCIENCE

LET'S DO CHEMISTRY

## Nature of Dye

EXPLORE SCIENCE

### LET'S DO CHEMISTRY

## Nature of Dye

### Facilitator Guide

**ACTIVITY LEARNING GOALS**

Learners will develop positive attitudes toward learning about chemistry:

- Learners will increase their feelings of **interest** in chemistry exploration and observations of phenomena.
- Learners will increase their understanding of the **relevance** of the applications and uses of chemistry and connections to real-world phenomena.
- Learners will increase their sense of **self-efficacy** related to their interaction with real tools and materials.

Learners will explore chemistry concepts, tools, and practices:

- Chemists use tools to discover and make new things.
- People shape the development and use of new materials.

**FACILITATION STRATEGIES**

Try to encourage **interest** and **self-efficacy** through hands-on use of tools and materials. Ask participants to predict, observe, and test their experiment with the dye. What was their favorite color to mix?

You can help make connections (**relevance**) by asking questions about their responses. Ask participants to predict, observe, and share what they think about labeling materials or ingredients in foods, and what they think about labeling materials or ingredients more about where the color comes from. Ask if the colors they might be wearing.

**MATERIALS**

- Cochineal bugs (dried)
- Soda ash (sodium carbonate)
- Vinegar solution
- Water
- pH solution
- Mortar and pestle

EXPLORE SCIENCE

### LET'S DO CHEMISTRY

## Nature of Dye

### Prepare a dye

Place two pieces of cochineal bug parts into the mortar. Crush the bug into a fine powder using the pestle. How does it look like?

Use the water dropper bottle to add three or four drops to the mortar and mix the solution using the pestle. How does it change?

### Change the color

Use the pipette at your station to transfer one drop of your bug mixture (cochineal dye) from the mortar dish into each section of the 3-part petri dish.

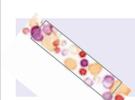

Use the vinegar dropper bottle to add one drop onto the cochineal dye in one of the petri dish sections. What changes do you notice?

Now, use the soda ash dropper bottle to add one drop onto a different cochineal dye section. What changes do you notice here?

### Test and experiment

Test the differences in the three dyes using strips of pH paper. How do the different dyes compare? Experiment by mixing the three dyes. You can retest the pH of your new mixture.

**Let's keep exploring!** Make a cochineal bookmark to take home! Dip a strip of watercolor paper into your dye samples to transfer the color. Or try using the pipette to add colors to the paper. How many shades of reds, oranges, and purples can you make?

**LET'S DO CHEMISTRY**

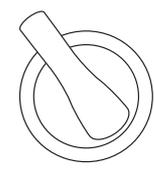

**WHAT MAKES ME RED?**

**LET'S DO CHEMISTRY**

**WHAT MAKES ME ORANGE?**

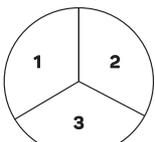

### How many colors can you make?

Mortar & Pestle

Pipette

Petri Dish

# REVEAL

## Responsive Museum Facilitation

A Video-Based Reflection Guide for  
Engaging with Families at Interactive  
Exhibits

**Elizabeth Andanen**

Turbine Hall Assistant Manager  
Oregon Museum of Science and Industry

## REVEAL: Researching the Value of Educator Actions for Learning

### Goals:

- Better understand how facilitation works in unstructured interactions at interactive exhibits.
- Build a theoretical model of facilitation; test the impact of facilitation on the museum floor.
- Focus on families and math – but results generalizable beyond this content area and social setting.

## Responsive Museum Facilitation

Filmed unstaged interactions with families with trained facilitators who either facilitated naturally or only greeted families

Goals for facilitators:

- Mathematical discourse
- Intergenerational communication
- Visitor satisfaction

## **Responsive facilitation made a difference, compared to a “greeting” condition**

- A primary impact of facilitation was a significant increase in the amount of time the family spends at the exhibit.
- Increased engagement time was associated with higher levels of math reasoning, general satisfaction, and intergenerational communication
- Independent of engagement time, there was a small decrease in intergenerational communication with facilitation.
- Effect of facilitation differed by exhibit and educator.

## Responsive museum facilitation: video-based professional development

- Written as a guide for a staff member to lead a group of facilitators
- Continuously reinforces four major threads that were fundamental to the REVEAL facilitation approach:
  - Understanding and empathizing with our visitors and working to appreciate their perspectives;
  - Treating others as they want to be treated, not just how we would want to be treated ourselves;
  - Balancing the educational goals of facilitators with the needs and interests of visitors; and
  - Engaging in ongoing self-reflection and learning.

## Five modules in the series

- Module 1: Understanding the Family Context
- Module 2: Supporting Intergenerational Communication
- Module 3: Encouraging Exploration and Inquiry
- Module 4: Negotiating Family and Facilitator Goals
- Module 5: Recognizing Expectations and Shared Understandings

**Intergenerational communication = the time that family members of different ages spend interacting and talking with each other (rather than with a facilitator)**

We know:

- Families are a central audience for informal learning institutions
- Families are highly effective at learning together and making meaning around different situations and topics
- If adults and children participate together, they are more likely to think and talk about experience after they leave the museum

**How can facilitators interact with families without negatively impacting the intergenerational communication?**

## Reflect on your prior experiences:

- 1) In families and multigenerational groups, how do people of different ages usually interact with exhibits at your institution? Are there roles that particular family members tend to take on?
- 2) Which group members (e.g., adults or kids) do you usually focus on when facilitating with families? Why?

## Module 2 Video 1

# Module 2: Supporting Intergenerational Communication

**Video 1:** Two adults and three children have been experimenting with the Balancing Art exhibit for several minutes when the facilitator approaches and offers the group a challenge.

07:12

OMST 2016

## Video reflection

- 1) What did you notice happening in this video segment? What evidence did you see of intergenerational communication between adults and children?
- 2) What did the facilitator try to do to involve the adults in the activity and encourage them to interact with the children?
- 3) How were these strategies more or less successful?
- 4) Was there anything the facilitator did that might have inhibited interactions between adults and children?

Questions?

# Upcoming Online Workshops

**Extending Your Earth & Space Science Exhibits -  
Free Multimedia Resources from NASA's Universe  
of Learning, NASA's Eyes, and the NISE Network**

Tuesday, November 27, 2018

2pm-3pm Eastern / 11am-12pm Pacific

**Learn more at [nisenet.org/events](https://nisenet.org/events)**

# Annual Partner Survey – Coming Soon

---

**When:** Email invitations in November

**Why:** In order to learn more about your experiences in the NISE Network and with presenting Earth and space science content we want to hear from partners:

- Across a diversity of roles, institution types, geographical regions, and levels of Network involvement
- Whether or not you completed last year's survey
- Even if others at your organization have participated

**Who:** Contact Marta Beyer at [mbeyer@mos.org](mailto:mbeyer@mos.org) with any questions

# EXPLORE SCIENCE Earth & Space

**Applications Now Open!**

**Explore Science: Earth & Space 2019 toolkit applications  
are due November 1, 2018**

<http://www.nisenet.org/earthspacekit-apply>

# Get Involved

Learn more and access the  
NISE Network's online digital resources  
[nisenet.org](http://nisenet.org)

**Subscribe to the monthly newsletter**
