Introduction

NanoDays

NanoDays is a nationwide festival of educational programs about nanoscale science, engineering, and technology and its potential impact on the future. NanoDays events are organized by partners in the Nanoscale Informal Science Education Network (NISE Net), and take place at over 200 science museums, research centers, and universities across the country from Puerto Rico to Hawaii. NanoDays engages people of all ages in learning about this emerging field of research, which holds the promise of developing revolutionary materials and technologies.

The first nationwide NanoDays events took place in 2008 with more than 100 institutions participating. Since then, NanoDays has grown to over 200 events, and continues to expand. NISE Net is distributing 225 physical kits in 2013.

NISE Network

The Nanoscale Informal Science Education Network (NISE Net) is a national community of researchers and informal science educators dedicated to fostering public awareness, engagement, and understanding of nanoscale science, engineering, and technology.

In 2005, the Network was funded for an initial five-year period through a cooperative agreement from the National Science Foundation (NSF). In 2010, NSF funding was renewed for a second five-year term. During the first five years, the NISE Network built a nationwide collaborative network of informal science educators and research outreach specialists that work together to raise public awareness, understanding, and engagement about nano. The Network has created a range of educational products including: educational programs for a diverse range of audiences; exhibits; media (videos, posters, books and multimedia experiences); a website with an online catalog of freely downloadable activities (www.nisenet.org); a public website (www.whatisnano.org); and NanoDays, an annual public outreach event that reaches hundreds of thousands of people each year.

In coming years, the Network will continue to increase the capacity of the informal science education community to engage the public in nanoscale science, engineering, and technology, and to form partnerships with research centers. At the same time, the NISE Network will continue to develop and distribute educational products designed to raise public awareness and understanding of nanoscale science, engineering, and technology.

How to Participate in NanoDays 2013

Being part of NanoDays is easy: all you need to do is host a day or a week of activities on the theme of nanoscale science, engineering, and technology during NanoDays: March 30 – April 7, 2013. The NISE Network has developed a variety of resources to help you, including NanoDays kits and other products in our online catalog.

Every year, over 200 NanoDays events are held across the country, including hands-on activities and demos, speaker events, theater presentations, art shows, lab tours, lectures, deliberative forums, and science cafes. Through NanoDays, the NISE Network reaches a diverse public audience with a broad geographic distribution, including individuals with disabilities and under-represented demographics in science, technology, engineering, and math (STEM).

Many NanoDays celebrations combine hands-on activities with opportunities to explore current research. In addition to the materials provided in the NanoDays kit, there are many more educational experiences in the NISE Net online catalog. For example, one popular activity involves visitors working together to build a giant balloon model of a carbon nanotube. Some NanoDays celebrations include science cafés or public forums with discussions about ways that new nanotechnologies interact with and impact our society. Participating universities may host public tours of their laboratories that work with nanoscale science and technology. For more ideas about what you could do for NanoDays, please read through this guide and browse our online catalog: www.nisenet.org/catalog

NanoDays Kits

Each year, the NISE Network develops and distributes kits with hands-on activities and other educational materials designed to introduce the public to basic concepts of nanoscale science, engineering, and technology. NanoDays kits include all the materials you need to hold a successful event. Each year, the NanoDays kits include both new activities and returning favorites.

NISE Net produces two kinds of NanoDays kits: the physical kit and the digital kit. Both kits provide the same information about hands-on activities and include guides and tips to help you stage your NanoDays events. The physical kit contains all materials and supplies for each activity and includes physical signage. Digital kits include downloadable guides and printable graphic files.

Physical kit eligibility: These kits are designed for informal science educational institutions (such as museums and research center outreach programs) within the United States.

Digital kit eligibility: Free online download is available to anyone who registers on nisenet.org. The digital kit is designed particularly for international locations outside the United States, K-12 educators, libraries, and other educational organizations.

Physical kits are distributed annually on an application basis to informal science educators and research education specialists within the United States, who deliver these programs and activities to public audiences. Kit recipients are expected to provide feedback about their NanoDays events using an online report. Kit recipients also receive support and advice from regional coordinators that are located at key institutions, or hubs, across the country.

The digital kit is available for free download to other educational organizations, including international locations outside the United States, K-12 educators, and libraries. Most NanoDays activities use inexpensive, easy-to-find supplies, making it easy to host a NanoDays event using the digital kit.

This planning guide prescribes very little about the exact nature of your NanoDays event—for a good reason. NanoDays events reflect the capacity, needs, and resources in each community. There is no one kind of event that is most successful, and each community is encouraged to discover what is best for its own situation and public. Enjoy these materials as you help to celebrate NanoDays: the biggest event for the smallest science!

Key Concepts for Engaging the Public in Nano

Nanoscale science, engineering, and technology (or “nano,” for short) is a new, interdisciplinary field of research and development. Just within the past couple decades, scientists have developed methods and tools that allow them to explore some of the most fundamental aspects of our natural world, and to develop new materials and technologies. Some experts think that nanotechnologies may transform our lives—similar to the way that the automobile and personal computer changed the way we live and work.

The great potential of nanotechnology comes from its tiny size. Nano research and development happens at the scale of atoms and molecules. Some things have different properties at the nanoscale, which allows scientists and engineers to create new materials and devices.

But nano isn’t just in the lab—we can already find it in our homes, stores, and hospitals. In the next 10 years or so nanotechnologies and materials will become even more present in our lives. We’ll find nano in everyday products, such as computers, food, cosmetics, and clothing. Nano might also be part of solutions to big problems, helping address needs such as clean energy, pure water, and cancer treatments.

It’s important for everyone to be informed about nanotechnologies, because they’ll be an important part of our future. Like any technology, nanotechnologies have costs, risks, and benefits. Since nanotechnologies are still developing, we can influence what they are and how they’re used. We all have a role in shaping how nanotechnologies become part of our future.

Nano is a big and exciting field of study, and there’s a lot to know. But the most important concepts of nanotechnology are also some of the most important concepts for understanding our natural world, the process of science and engineering, and the ways that society and technologies are interconnected.

To begin to understand nano, we can explore four key concepts:

1. **Small and different:** Nanometer-sized things are very small, and often behave differently than larger things do.
2. **Studying and making tiny things:** Scientists and engineers have formed the interdisciplinary field of nanotechnology by investigating properties and manipulating matter at the nanoscale.
3. **New technologies:** Nanoscience, nanotechnology, and nanoengineering lead to new knowledge and innovations that weren’t possible before.
4. **Part of our society and our future:** Nanotechnologies have costs, risks, and benefits that affect our lives in ways we cannot always predict.

These ideas are presented in more detail in the document *Engaging the Public in Nano: Key Concepts in Nanoscale Science, Engineering, and Technology*. It can be found in the Training Materials, as well as in the NISE Net online catalog: www.nisenet.org/catalog/tools_guides/engaging_public_nano

Planning Timeline

October-December

- ☐ Apply for your NanoDays kit. Applications open in October.
- ☐ Award of NanoDays physical kits is typically made in December. You should expect to hear about the status of your kit application toward the end of the calendar year.
- ☐ Subscribe to the monthly *Nano Bite* electronic newsletter: www.nisenet.org/community/nanobite
- ☐ Find your regional hub contact and introduce yourself: www.nisenet.org/community
- ☐ Make contact with the individuals and institutions that might be interested in organizing a NanoDays event in your community.
- ☐ Schedule a kickoff meeting to organize your event. Topics for the agenda include:
 - What are your goals for holding a NanoDays event?
 - Who is your target audience?
 - What kinds of events and activities would reach this audience and meet your goals?
 - Who will lead the planning of the event? Who else will be involved?
 - How will you communicate with your collaborators?
 - What dates will you hold your event?
 - Do you need funding to support the event? If so, where will it come from?
- ☐ Choose a date and add your NanoDays event to your institutional calendars.

January

- ☐ Your NanoDays kit will arrive in January. Explore the materials in the kit with your staff and your collaborators.
- ☐ Plan your event. Your planning process might include creating:
 - A brief description of the event (type of activities, dates, times, location)
 - A budget (and local fund-raising plan, if necessary)
 - An outline of the event goals (and a plan for evaluating how well the event meets the goals)
 - A list of tasks and note of who is responsible for each task
 - A schedule with the major milestones for preparation
 - A marketing strategy
- ☐ Review your plans with your facility manager and/or health and safety officer. Many facilities have guidelines or restrictions that could affect the logistics of your event or the demonstrations and activities you can include. You might ask about:
 - Restrictions related to use of water, open flames, chemicals, or hanging or suspended objects
 - Parking for visitors
 - Cleaning and sanitation service schedules
 - Security needs

February

- ☐ Talk with collaborators about potential sources of staff and volunteers for the event.
- ☐ Draft an activity floor plan. Keep in mind that some activities need water, some can be messy, and some are better with a place for visitors to sit down.
- ☐ Identify, invite, and finalize speakers and presenters.
- ☐ Work with your colleagues to create final marketing materials. Customize the NanoDays press materials, flyers, and ads for your event.
- ☐ Implement your marketing plan and begin promoting your event. Coordinate efforts among your own institution's marketing and promotional staff, as well as your collaborators' staff.

March

- ☐ Continue to implement your marketing plan.
- ☐ Create additional tabletop signs (if you are adding activities beyond those provided in the kit).
- ☐ Consider creating signs or handouts listing the activities you're offering, as well as their time and location.
- ☐ Do a test run of the activities.
- ☐ Hold a staff/volunteer training event in advance or on the day of the event.
- ☐ Meet with guest speakers about your audience and expectations.
- ☐ Make final preparations for evaluation of your event (staffing, supplies, floor plan, schedule).

NanoDays week

- ☐ Hold your NanoDays event!

After NanoDays

- ☐ Debrief your NanoDays event with your planning team. Identify elements of your event that were successful, as well as things you might want to change next time.
- ☐ Fill out your NanoDays event report form (www.nisenet.org/nanodays).
- ☐ Document your event for your future use. Save copies of programs, posters, and any newspaper or media coverage of your event.
- ☐ Share information and images using the NISE Net links on social networking outlets, such as the Network's Facebook page (www.nisenet.org/community).
- ☐ Thank your collaborators, sponsors, and volunteers.
- ☐ Discuss future plans with collaborators and colleagues. Choose an event date for next year and get the date on relevant community and organizational calendars.

Year-Round

- ☐ Incorporate the NanoDays materials into other activities. Many NISE Net partners use the kit materials in seasonal camps, afterschool clubs, science festivals, and other outreach activities.
- ☐ Check out additional resources in the online catalog to try (www.nisenet.org/catalog).
- ☐ Contact your regional hub coordinator to find out about any additional professional development opportunities that may be happening in your region.
- ☐ Leverage the partnerships you have established through NanoDays for other projects.
- ☐ Look for next year's kit application in the Fall! Every year, the NanoDays kit has new activities to help you engage the public in nanoscale science, engineering, and technology.

Finding Collaborators

NISE Net encourages you to collaborate with at least one other institution in your community to plan and conduct your NanoDays event. Partnerships among informal science educators, scientists, and engineers can provide your event with your combined expertise: a sophisticated understanding of how to engage the public, as well as a deep background in the science and technology of nano. NanoDays provides a good opportunity to make new friends and long-term relationships, in addition to established collaborations your institution may already have.

Possible collaborators for your NanoDays event:

- Museums
- Nano research centers
- Individual scientists at a local college or university
- High school science teachers
- Local technology or nanotechnology businesses
- Libraries
- Community organizations involved in youth development and out-of-school programs for the public (Boys and Girls Clubs, Girl Scouts, 4H, afterschool programs)
- Schools
- Local government agencies

Potential sources of volunteers:

- College students, classes, or clubs with community service requirements
- High school science clubs, or students suggested by local high school science teachers
- Local chapters of professional science and engineering groups, such as:
 - American Chemical Society (ACS): www.acs.org
 - Materials Research Society (MRS): www.mrs.org
 - National Society of Black Engineers (NSBE): www.nsbe.org
 - Society for Advancement of Chicanos and Native Americans in Science (SACNAS): www.sacnas.org
 - Society of Women Engineers (SWE): www.swe.org
- Drama and theater students
- Local industry staff and retirees

Regional Hub Contacts can help suggest collaborators: www.nisenet.org/community. You can also explore these additional resources:

- “Small Steps, Big Impact: A Guide for Science Museum Leaders Developing Education Outreach Partnerships with University-Based Research Centers”: www.nisenet.org/catalog/tools_guides/small_steps_big_impact
- “Bringing Nano to the Public: A Collaboration Opportunity for Researchers and Museums”: www.nisenet.org/catalog/tools_guides/bringing_nano_public_collaboration_opportunity_researchers_museums
This guide can also be shared with others at your organization, to plan collaborations beyond NanoDays.
- Resources for researchers: www.nisenet.org/rise

Training Staff and Volunteers

The 2013 NanoDays kit includes training materials you can use with the staff and volunteers who will be helping make your event a success. Many local NanoDays events include a variety of partners, including museum staff and volunteers, researchers, students, and others.

The 2013 NanoDays kit includes volunteer and staff training materials:

- *NanoDays Orientation* slideshow and notes
- *A Museum Presentation* videos and guide
- *Tips for Engaging Visitors* and *Tips for Visitor Conversations* reference sheets
- *Nano 101 for Staff* slideshow and notes

These resources can help give both new and experienced staff and volunteers an overview of the event and suggestions for engaging their audience in nano. NanoDays training materials are available in the online catalog: www.nisenet.org/catalog/tools-guides/training_materials

Guest Presentations

Expert speakers can be a wonderful addition to your NanoDays event. With extra preparation and support, guest presentations can provide a great experience for both the speaker and the audience.

Here are some suggestions to help make things go smoothly:

- When inviting scientists to participate, be clear about their role and type of experience you're seeking.
- Familiarize invited guest speakers with your expected audience, including anticipated ages, level of background knowledge.
- Let speakers know about any expectations you may have related to audience involvement.
- Discuss the content and length of the planned presentation.
- Share the following page, "Tips for guest speakers," with your presenter. You might also share some of the other NanoDays training materials.
- Encourage your invited speaker to use plain language, avoiding jargon and technical terms.
- Discuss details about your facility, including room size, seating style, and audio-visual equipment.
- Ask to review a draft slideshow or notes in advance and discuss the planned presentation together.
- Schedule time before the presentation to work out any audio-visual or logistical issues.
- Prepare questions that may help stimulate audience discussion.

Tips for guest speakers

Public audiences find emerging science and technology interesting. Keep in mind, however, that only a small percentage of the population knows much about this topic. Here are a few pointers for communicating with the public about nanoscale science, engineering, and technology.

Know your audience

The more you know about your audience, the better you can adapt your presentation to their interests. Keep in mind the diversity of your audience's experience and backgrounds. Remember that many NanoDays visitors attend in family groups, which can include a wide range of ages.

Keep the message simple

Come up with one "big idea" you want the audience to take away from the experience, and make sure your presentation reiterates and reinforces this idea in different ways. Define your terms, avoiding jargon and acronyms as much as possible. Check in with your audience periodically to see if they're following you.

Use familiar analogies

Use comparisons to everyday experiences. Explain how the topic relates to something that's been in the news or in popular culture.

Use relative size and scale

Focus on relative size and scale rather than exact measurements. Consider using parts of the human body to explain relative scale.

Use visuals

Simple images and models will reinforce and clarify your message.

Use several modes of presentation

In addition to talking, you can include demonstrations, videos, and pictures. You can involve the audience by providing objects to pass around, asking questions, doing brief experiments, providing hands-on activities, and playing games.

Involve the audience in the processes of science

Encourage your audience to observe, predict, and explore by asking them questions:

"What do you think will happen when . . . ?"

"Were you surprised?"

"Why do you think that happened?"

"What if you tried . . . ?"

"Can you think of any practical uses for this?"

"What about unintended consequences?"

Be friendly and approachable

Remember to make eye contact, smile, and let the audience know who you are. If you're a scientist, consider including personal stories about your work life and your career decisions.

Be prepared to answer common questions

But don't be afraid to let your audience know if you don't know the answer to their question.

Share ways to learn more

Remember that your presentation is only one exposure that people will have to nano—it's not the end of their learning. Help the audience connect to other opportunities for more exploration. A good place for them to start is www.whatisnano.org.

Additional Training Resources

Some of the volunteers and staff for your event may be unfamiliar with nanoscience and engineering, and would benefit from a basic introduction to nano. The NISE Network website features a catalog of online resources for professionals. We also have a public website www.whatisnano.org with direct-to-public resources created by the NISE Network and other institutions, which we encourage you to share with your staff, volunteers, and public audiences.

There are many training resources available through www.nisenet.org, including some that may be more appropriate for existing museum staff and volunteers who may be unfamiliar with nano content. Keep in mind that some of our public educational products that can be fun ways to introduce staff and volunteers to nano. Some training materials you might explore include:

Public website

www.whatisnano.org

Introductory materials

www.nisenet.org/catalog/tools_guides/intro-to-nano

Guidelines for creating accessible programming:

www.nisenet.org/catalog/tools_guides/universal-design-guidelines-programs

Nano Around the World

www.nisenet.org/catalog/programs/nano_around_world

Ideas for Your NanoDays Event

NISE Net partners have contributed many ideas that might inspire you as you start to think about your NanoDays event. In general, the more you can tailor your NanoDays event to the unique strengths and resources of your community, the more compelling it will be to your audience.

Offer a day or week of activities

In addition to the materials contained in your NanoDays kit, ideas for programs and demonstrations can be found online: www.nisenet.org/catalog

Include additional activities related to nano and society

NISE Net has developed a set of new activities that encourage conversation about nano and society between museum visitors and facilitators:

www.nisenet.org/community/events/other/nano_society_workshop

Schedule a public presentation or demonstration by a scientist

If you don't already have a local connection, your regional hub leader can help you find appropriate scientists or student groups: www.nisenet.org/community

Host a theater presentation

Work with local actors or theater students to do a creative performance addressing nano themes. NISE Net has theater programs designed for families, as well as programs that focus on issues suitable for adult audiences. Scripts and videos are available online:

www.nisenet.org/catalog/programs/museum_theater

Offer a science café

A science café is an event that brings scientists and an adult audience together in an informal setting like a restaurant, pub, or coffee shop: www.nisenet.org/catalog/tools-guides/science-cafe-guide

Host a forum

Invite an adult audience to learn about nanoscale science and engineering, and then participate in small-group discussions about the societal implications of nanotechnology: www.nisenet.org/forums

Set up a magnification station

Set out interesting objects for visitors to explore with magnifying glasses and microscopes. Share images of a world too small to see with just our eyes. A collection of images is available here:

www.nisenet.org/viz_lab/image-collection

Create a reading area

Create a small quiet spot at your event displaying books for children and adults on nano topics; some children's books are suitable for read-aloud story time presentations. A list of suggested books is available here: www.nisenet.org/catalog/tools_guides/selected_books_about_nano

Make imaginary “nanobots” from scrap materials

Encourage visitors to create models of future nano inventions. Supply discarded or recycled materials (cardboard, paper, containers) along with craft materials (scissors, glue, string, tape) and let visitors imagine the possibilities. You can use the following program to help guide the activity:

www.nisenet.org/catalog/programs/shrinking_robots

Show educational videos

There are many great videos available for public audiences in the NISE Net online catalog:

www.nisenet.org/catalog/media

DragonflyTV also has a series focusing on nano:

pbskids.org/dragonflytv/nano

Host an open house at a nano research center

An open house event could include tours of laboratories, demonstrations and lectures by research faculty, and group activities led by students and faculty.

Display images of the nano world created by scientists

Many scientists have created beautiful images of nanoscale objects. You can invite a scientist or a lab to display their imagery.

Meet a scientist

Create a space at your event where visitors can talk informally with a nanoscientist and ask questions.

Prepare some signage and questions to help get discussions started. Or try Scientist Speed Dating:

www.nisenet.org/catalog/programs/scientist_speed_dating

Create a collaborative nano stained glass artwork

Create a collaborative stained glass window with pre-made nanoparticle solutions containing silver or gold and have visitors create a take-away stained glass card:

www.nisenet.org/catalog/programs/nanoparticle_stained_glass_card_program

www.nisenet.org/catalog/programs/nanoparticle_stained_glass_classroom_program

www.nisenet.org/blogs/network_news/nano_stained_glass_collaboration_madison_wi

Additional Resources

The NISE Network website features a catalog of online resources designed for professionals. The online catalog includes educational experiences for you to implement with the public, as well as resources to prepare you and your staff. We also have a public website (whatisnano.org) with resources created by the NISE Network and other institutions, which we encourage you to give to your public audiences.

Public Websites

whatisnano.org

The NISE Network public website is a great place to send your visitors for more information about nano that they can explore after attending your event: www.whatisnano.org

DragonflyTV Nano

This kid-friendly site includes online television episodes, interviews with nanoscientists, online games, and activities to try at home: pbskids.org/dragonflytv/nano

Evaluating Your Event

The activities and materials included in your NanoDays kit have been evaluated with public audiences and reviewed by scientists and informal science educators.

The NISE Network also evaluates the impact of NanoDays as a national event. The evaluation team examines the reach of NanoDays nationally, and studies the impact of NanoDays on public awareness and understanding of nano. Findings from NISE Network evaluation studies are used to improve NanoDays materials, and to inform the Network of its impact on the public. Full reports are available online at www.nisenet.org/catalog/eval.

You may want to evaluate your local NanoDays event against your own event goals. Evaluating your local NanoDays event has several benefits. It can help clarify your goals, provide information that you can use to improve your event next year, gain funding or sponsorship for projects, and inform your understanding of your audience and the impact of your work.

If you're interested in learning more about evaluation, here is a selection of resources to help you get started.

NISE Network program evaluation tools

Including guidelines and templates:

www.nisenet.org/catalog/tools_guides/nise_network_program_evaluation_tools_package

NanoDays Reporting

If you host a NanoDays event, we ask you to provide a brief report about your event and your experience. You are required to report on your event if you receive a physical kit from the Network. You'll find a link to an online reporting form on www.nisenet.org/nanodays. You typically have a month following NanoDays to fill out your report form.

The Network evaluation team and NanoDays team use the NanoDays report to assess the current year's event and to plan for NanoDays in coming years. Information from past NanoDays evaluations have informed to changes in the kit's educational materials and in the other kinds of resources NISE Net provides. If you've participated in NanoDays before, you may have filled out a NanoDays report in the past. A new report is required each year you participate.

Only one report needs to be submitted per NanoDays event. If you co-hosted an event with another organization, using a single physical kit, only one organization needs to fill out the online report.

While the NanoDays report changes slightly from year to year, we are generally interested in learning what your NanoDays event was like, whom you collaborated with to plan and host the event, and how we might improve NanoDays in the future. In past years, questions have included: which activities you included in your event (including those from the kit, from other sources, and those you developed yourself); how long your event lasted; which other organization you worked with to host NanoDays; what goals your institution had for your NanoDays event; and how the NISE Net might help you meet those goals.

If you have more information about a NanoDays event that you think was particularly successful, or a lesson learned, we're always interested in sharing those stories with the wider Network. Please contact your regional hub leader or send a message to info@nisenet.org to tell us about it.

Promotional and Marketing Materials

We've put together a collection of resources to help you promote and market your NanoDays event and other nano educational activities. We've designed everything to be as easy to use as possible, by creating templates, common software platforms, and simple instructions for adding your information and logos to generate attractive posters, banners, T-shirts, and other marketing materials.

We hope that you will use these resources so that your event helps us build a national awareness and a common "brand" for NanoDays and nano public outreach that we can all benefit from. However, you may also use your own established materials and logos.

All of the artwork and images shown on the following pages are available in electronic format on the USB thumb drive included in your Kit or online at www.nisenet.org/nanodays. We've provided bilingual Spanish and English options to help promote bilingual events. For questions regarding the usage of the NanoDays logo or other marketing materials, please send an email to nanodays@nisenet.org.

Writing Guidelines

We use "NanoDays" courtesy of North Carolina State University, which owns the trademark for this term. When referring to NanoDays in writing, please use the capital "N" and the capital "D," with other letters lower-case, and include the "TM" as appropriate.

If you refer to the Nanoscale Informal Science Education Network (NISE Net) in writing, please capitalize the "NISE" and the "N" in Net: NISE Network, or NISE Net.

Logos

NISE Net has several NanoDays logos available for use in graphic materials. Please note that in 2011, we created new NanoDays logos. All NISE Net NanoDays materials are available with the current logo, including materials from earlier kits, in the online catalog.

If you create your own NanoDays materials, we prefer you use the current logo. If you already have existing materials with the old logos, feel free to continue to use them. NanoDays logos are included in the Marketing Materials Appendix of this guide and on the USB thumb drive.

Fonts

The NanoDays font is Calibri. Arial is a suggested alternative.

Colors

Green, purple, and white are the primary colors of the NanoDays color palette. Tints from 100% to 10% work well, and give you a range of design options. The color palette is specified in the Marketing Materials Appendix of this guide.

Web Icons

We have created a set of web icons for the NISE Net website (www.nisenet.org) and the public website (www.whatisnano.org). Please use these embeddable widgets to link to our websites from your institution's page. Embeddable widgets are available at: www.nisenet.org/PRmaterials

Press Photos

We have provided a selection of press photos that you can use to market your NanoDays events (as well as other events and materials related to NISE Net). These photos are free for use under a Creative Commons Attribution-NonCommercial 3.0 Unported License. Please see the Marketing Appendix for information on how to credit the photographs appropriately.

Banners

Two large NanoDays banners are included in your NanoDays kit (English and bilingual Spanish-English). You can use adhesive vinyl lettering to customize the banner with your event date, times, location, and other information.

If you would like to print additional banners with your customized event information, it's easy to do. Use the banner template on the USB thumb drive, then send your art to one of the many online banner-printing companies or take it to your local printer. A 3' x 5' banner (vinyl, with grommets) should cost about \$100.

NSF Acknowledgement of Support

The NISE Network, NanoDays, and the creation of this kit are all funded by the National Science Foundation under Award Nos. 0532536 and 0940143. Although your event might not receive direct NSF funding, if you use our kit materials or produce deliverables based on the kit materials, you should follow NSF guidelines for acknowledging NSF support.

Statement for deliverables:

This project was based on work supported by the National Science Foundation under Award Nos. 05322536 and 0940143.

Additional statement for publications:

Any opinions, findings, and conclusions or recommendations expressed in this work are those of the authors and do not necessarily reflect the views of the Foundation.

The NSF logos are available in a variety of colors and file formats that can be downloaded from: <http://www.nsf.gov/policies/logos.jsp>. Here are two basic NSF logos:

Celebrate NanoDays™ 2013 [at Name of your organization]

[Insert your local NanoDays location, dates, and specific activity information here].

NanoDays at [name of your organization] is part of a nationwide festival of educational programs about nanoscale science and engineering.

NanoDays is organized by the Nanoscale Informal Science Education Network (NISE Net), and takes place nationally from March 30-April 7, 2013. This community-based event is the largest public outreach effort in nanoscale informal science education and involves science museums, research centers, and universities from Puerto Rico to Alaska.

NanoDays celebrations bring university researchers together with science educators to create learning experiences for both children and adults to explore the miniscule world of atoms, molecules, and nanoscale forces. Most NanoDays events combine fun hands-on activities with presentations on current research. A range of exciting NanoDays programs demonstrate the special and unexpected properties found at the nanoscale, examine tools used by nanoscientists, showcase nano materials with spectacular promise, and invite discussion of technology and society.

The local community can experience many of these activities firsthand. Visitors will explore how 3D images are made, investigate new nano products and materials, and imagine what the world might look like if we could build an elevator to space! Other activities include making bracelets that change color in the sun and a storytime reading of Dr. Seuss's *Horton Hears a Who*. [Edit for your institution]

More about Nano and NISE Network

At the nanoscale—the scale of atoms and molecules—many common materials exhibit unusual properties. Our ability to manipulate matter at this size enables innovations that weren't possible before. Nanotechnology is revolutionizing research and development in medicine, computing, new materials, food, energy, and other areas.

Nano will affect our economy, the environment, and our personal lives. Some scientists think that future nanotechnologies and materials could transform our lives as much as cars, the personal computer, or the Internet! But the costs, risks, and benefits of this new technology can be difficult to understand, both for experts and for the general public. The NISE Network helps museums, research institutions, and the public learn from each other about this emerging field so that together we can make informed decisions.

The Nanoscale Informal Science Education Network (NISE Net) is a national community of researchers and informal science educators dedicated to fostering public awareness, engagement, and understanding of nanoscale science, engineering, and technology. The NISE Network community in the United States is led by 12 organizations, and includes hundreds of museums and universities nationwide. NISE Net was launched in 2005 with funding from the National Science Foundation, and received a five-year renewal in 2010.

Through products like NanoDays, the NISE Network is actively building partnerships between science museums and research centers to increase their capacity to engage the public in learning about nanoscale science and engineering.

For more information about NISE Net or to download a digital NanoDays kit please visit:

<http://www.nisenet.org/nanodays>.

For more information about Nano please visit:

<http://www.whatisnano.org>

This project is based on work supported by the NSF under Award Nos. 05322536 and 0940143.

NanoDays™ is trademarked by North Carolina State University and used by the NISE Network with permission.

Photo Release Form

Most institutions require that some kind of photo release form be signed in order for you to circulate photos from your event in any way. Whether or not this is a formal policy in your institution, you should always ask for permission before photographing participants, especially children. Getting signed releases gives you the flexibility to use your photos in newsletters, reports, and other settings.

We welcome you to share photos from your event with the network, with the following caveat: in order to be able to use and share photos of local NanoDays events, we must have a release signed by each person in the photo. In the NISE Network, photos are often shared and used by multiple institutions, so we need permission for all institutions in the NISE Network to use the image (not just your own institution). We understand that for many of our partners, it is not possible to get release forms from every person photographed or recorded. For this reason, the NISE Net does not require or expect photographs of your events.

The NISE Net photo release form is included on the next page. Fill in your organization's name in the second blank on the first line, then copy the form to use at your event. When you are asking visitors to fill out the form, be sure to explain that they can choose **not** to have their photograph or their child's photograph taken and still participate in the activity.

Here are a few tips to ensure you get a release from every person you photograph:

- If you are using a photographer for your NanoDays event, be sure to explain to them that they will need to get consent before taking photographs.
- It's helpful to have the releases and pens on a clipboard or two that you can hand to the visitor.
- In larger settings, or spaces with a lot of activity, consider assigning a staff person to join the photographer and ask visitors to sign the release before the photographer takes pictures. This person can ensure that no photographs are taken without consent, and can also ask the photographer to delete any pictures from their camera of visitors who did not consent.
- Jot down a description of the person on their release form (for example, "young girl, brown hair, yellow shirt"). This can help you match releases to photos later on.
- If you are hosting an event with nametags and registration, you can ask visitors to fill out the release when they register. If they have consented to have their photo taken, give them a sticker for their nametag. Then the photographer can take photos only of people with the stickers.

If you are able to get signed releases for your photos, please share them with us! You may send a CD with photos along with a scan of the releases to the Museum of Science at:

NISE Network
Museum of Science
1 Science Park
Boston, MA 02114

Questions regarding acknowledgements or credits can be directed to info@nisenet.org.

Museum of Science and NISE Network Photo Consent and Release

I, _____, hereby authorize _____ and the Museum of Science, Boston, MA (the "Museum") as agents acting for and on behalf of the Nanoscale Informal Science Education (NISE) Network, and its agents, representatives, assigns, successors in interest and licensees, to photograph, audiotape, and/or videotape me and grant the Museum and the NISE Network the irrevocable right to use my photograph, audio recording, video recording, or any reproduction or modification thereof (the "Photograph", "Audio, and/or "Video"), in any manner or medium throughout the world an unlimited number of times in perpetuity for advertising, trade, promotion, exhibition or any other lawful purpose.

I understand that I will not receive any monetary compensation for the permissions I am granting herein. I hereby waive any right of inspection or approval of the uses to which the Museum and the NISE Network may put the Photograph, Audio, and/or Video. I acknowledge the Museum and the NISE Network will rely on this permission and hereby release and discharge the Museum and the NISE Network from any and all claims and demands arising out of or in connection with the Photograph or the exercise of the permissions granted here, including any and all claims for libel, invasion of privacy or emotional distress.

I understand that I cannot withdraw my consent after I sign this form and that this consent and release is binding on me and my heirs, legal representatives and assigns.
