

# NISE Net Online Workshop

Changing Brains - New Tools for Brain Awareness Week & Beyond

Tuesday, March 14, 2023

## Today's Presenters:

**Darrell Porcello**, Ph.D., Children's Creativity Museum & Lawrence Hall of Science, University of California, Berkeley

**Claire Weichselbaum**, Ph.D., Barbara Gill Civic Science Fellow, Visiting Scholar, Arizona State University

**Susan Heilman**, Ph.D., Current Science Communication Team, Museum of Science, Boston

**Abby Gwinn-Arakas**, Director of Community Engagement, McWane Science Center

## Welcome!

As we wait to get started with today's discussion, please:

**Introduce yourself!** Type your name, institution, and location into the [Chat Box](#)

**Questions?** Feel free to type your questions into the [Chat Box](#) at any time throughout the webinar or use the raise your hand function in the participants list and we'll unmute your microphone.

**Today's discussion will be recorded and shared on nisenet.org at: [nisenet.org/events/online-workshop](https://nisenet.org/events/online-workshop)**

# Brain and Neuroscience Public Engagement Resources

Project Info & New Resources: [nisenet.org/brain](https://nisenet.org/brain)

More Resources: [nisenet.org/neuro](https://nisenet.org/neuro)

- Public engagement and professional development resources about the brain, neuroscience, and neuroethics
- Resources for annual events including **Brain Awareness Week**, World Brain Day, Mental Wellness Month, and more

# We have been hard at work...on the brain.

2018 Public Engagement with Neuroscience and Society Conference organized at the Franklin.

2019 *A Global Landscape of Neuroscience Public Engagement Efforts and the Potential Nexus of Neuroethics* published.

2020 Professional tools added to [nisenet.org](https://nisenet.org).

2020-22 Generative discussion leading to the publication of *Neuroscience is ready for neuroethics engagement*.

2022-23 Neuroethics engagement prototypes developed and evaluated.

## Neuroethics

exploring the ethical and societal  
implications of neuroscience  
research and neurotechnology

## Public Engagement

best practices to engage diverse  
audiences with scientific issues  
for mutual learning and dialogue

Attributes & Skills

# Neuroethics Engagement

# Project Framework

1. Stakeholder interviews led us to **Neurotechnology** and **Modeling Human Attributes**.

2. Leaned on NISE Net ideas: **People's values** determine which technologies are developed and used.

New technologies **change society**, sometimes in **unexpected ways**.

## Activities & Outputs

Identify neuroscience topics with ethical implications for society

Design and prototype new neuroethics engagement experiences

## Learning Goals

Practice personal attributes:

- Curiosity
- Creativity and imagination
- Reflexivity

Practice interpersonal skills:

- Communication
- Collaboration
- Empathy

## Activities & Outputs

Identify neuroscience topics with ethical implications for society

Design and prototype new neuroethics engagement experiences

## Learning Goals

Practice personal attributes:

- Curiosity
- Creativity and imagination
- Reflexivity

Practice interpersonal skills:

- Communication
- Collaboration
- Empathy

## Broader Impacts

Strengthen self-efficacy in discussing neuroscience topics and sharing values

Increase awareness of neuroethical issues and questions

*Develop potential for stakeholder input into neuroscience research and policy making*

# Guiding Ideas for Engagement

- People's values determine which technologies are developed and used.
- New technologies change society, sometimes in unexpected ways.
- Scientists, engineers, and designers use their creativity to invent things and imagine the future - just like you.
- Brain research benefits from many perspectives - including yours.

# Identifying Topics for Engagement

- Interviewed 30+ neuroscientists, ethicists, policy and law experts, and museum educators
- Identified two topics ripe for pilot neuroethics engagement
  - Neurotechnology
  - Modeling Human Attributes

# “Neuro Futures” Card Game

- How might future brain technologies change our society?
- How can we include many diverse perspectives and priorities in the development of brain technologies?

- Tabletop activity designed for small groups of adults, teens, and families
- Invites participants to prioritize emerging neurotechnologies from their own perspective, then from a character’s perspective

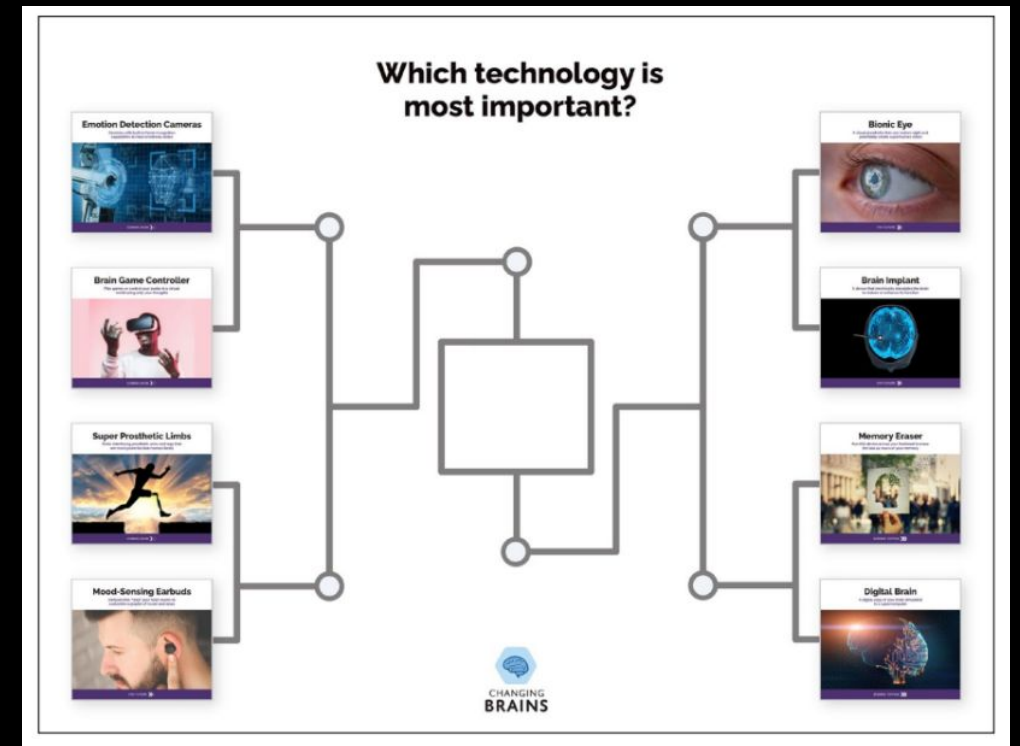

# “Neuro Futures Championship” Game

- How might future brain technologies change our society?
- How can we include many diverse perspectives and priorities in the development of brain technologies?

- Tabletop activity designed for small groups of adults, teens, and families
- Invites consideration and conversation about the implications of neurotechnologies through a sports-style tournament bracket

# “What Makes Us Human” Card Game

- What does it mean to be human? What is unique about the human brain?
- How human-like could machines become? What would be the risks/benefits?

- Tabletop activity designed for small groups of adults, teens, and families
- Invites participants to consider which abilities are most uniquely human, then design a robot incorporating some of those abilities

# Formative Evaluation

- Engagement activities tested with **public audiences** at the Arizona Science Center (n=47 groups)
- Observation & interview data collected, analysis by Allison Anderson at MOS
- **96% of participants** interviewed found the game interesting, majority said they would play again
- Children as young as **7-8 years old** could participate successfully with their families as well as teens, adults

## Learning Goals

### Practice personal attributes

- Curiosity
- Creativity & imagination
- Reflexivity

### Practice interpersonal skills

- Communication
- Collaboration
- Empathy

# Personal Attributes

**Curiosity** Visitors ask or wonder about the topic beyond what is introduced in the activity.

*“Would the smart pills be permanent or temporary?”*

**Creativity & Imagination** Visitors express ideas that build on the topic, beyond the information shared during the activity.

*“Using Emotion Detection Cameras in schools could help teachers help their students if they are in a bad mood or emotional distress.”*

**Reflexivity** Visitors recognize how biases and values (personal or communal) impact decisions about research and technology.

*“We’re a little more similar than I thought! But for different reasons.”*

# Interpersonal Skills

**Communication** Visitors share their opinions and perspectives relevant to the activity's topic and listen or respond to others' opinions and perspectives.

*Debate about whether to prioritize tech that will help people vs. letting the free market decide*

**Collaboration** Visitors work together to make a decision or solve a problem relevant to the activity.

*"Do we care if [the robot] can feel pain?"*

**Empathy** Visitors share their understanding of another person's perspective or experience, considering how that person might be impacted by an action.

*"I was thinking as Kim, thinking about my son"*

# Activities Supported Skills & Attributes to Varying Degrees

|  |                          | Neuro Futures Championship | Neuro Futures | What Makes Us Human? |

# Design Strategies to Support Skills & Attributes

Forced choice /  
requiring decisions

Character cards with  
different perspectives

Setting up simple  
hypothetical scenarios

Providing clear but  
limited information

# This activity is about...

"Where we're going as a society,  
where our values are" - 52yo

"More ethical [issues] than  
straight facts" - 31yo

"Reflecting on what we want  
to see ... thinking about  
ourselves and others" - 24yo

"About ourselves, how we  
feel and think" - 41yo

"Letting people know  
there's hope for them, like if  
someone is blind" - 10yo

"Very philosophical ... So often we  
think science is objective, but all  
exhibits have a perspective ... this  
brings it more to the surface" - 36yo

## CHANGING BRAINS

### Neuro Futures Card Game

#### FACILITATOR GUIDE

#### Materials

- Technology Cards
- People Cards
- Tokens (10 per player)

#### Learning Objectives

- People's values determine which technologies are developed and used.
- New technologies change society, sometimes in unexpected ways.
- Scientists, engineers, and designers use their creativity to invent things and imagine the future, just like you do.
- Brain research benefits from many perspectives, including yours.

#### Big Questions

- How might future brain technologies change our society?
- How can we include many diverse perspectives and priorities in the development of brain technologies?

**Note to Facilitator:** This activity is designed as an open-ended, conversational experience. There are no right or wrong answers; the goal is to facilitate self-reflection and dialogue among participants. The game consists of two rounds and a short debrief, requiring a total of 10–20 minutes. It works best with a small group (2–6 players), though a single player will also work.

#### Invitation for Visitors

"Would you like to play a game exploring the future of brain technology?"

# Program Training

- Resources: NISE Net Facilitation Guides, program materials
- Alignment with the Theory of Change and Interpretive Plan
- Flow of Training
  - Observation
  - Review – facilitation guides, research
  - Practice
  - Practice
  - Evaluation – Facilitation Assessment

# Special Events and Volunteer Opportunities

- Beaker Bash
  - Theme: I am a scientist
  - UAB Neuroscience students and McWane staff co-facilitated Changing Brains programs
- Group Volunteer Opportunities

  - Samford Gives Back: Pediatric Pharmacy Association

# Showcasing Scientists

McWane Science Center  
**HISTORY**  
MAKERS  
WOMEN'S HISTORY MONTH

## Rita Levi-Montalcini

Neurobiologist, Nobel Laureate, Keeper of Secret Labs

Rita's story is a one of overcoming. Despite the Victorian era in which she was raised, she attended medical school. Despite being banned from academic study for being Jewish, she pursued scientific discovery. Despite skepticism in the scientific community, she continued to search for a "nerve promoting factor" and went on to win a Nobel Prize. This woman was a force to be reckoned with who refused to let bombs or criticism stand in her way.

NATIONAL  
**HISPANIC**  
HERITAGE MONTH  
McWane Science Center

## Daniel Alfonso Colón-Ramos

Professor

Colón-Ramos is the Dorys McConnel Duberg Professor of Neuroscience and Cell Biology at Yale School of Medicine. His lab works with *C. elegans* to discover how synapses are assembled to build the neuronal architecture that underlies behavior. He was awarded the Humboldt Prize for his lab's work in describing aspects of the cell biology of synapses and behavior.

Pride in  
**STEM**

McWane Science Center

## Alex Hanna *(she/her)*

Sociologist and AI Researcher

Hanna has Bachelor's in Computer Science and Mathematics, & Sociology, and her Masters and PhD in Sociology. She is a trans woman of color, which influences her research centered on data used in new computational technologies and the ways this data exacerbates racial, gender, and class inequality.
