

Bear's Shadow

Bear makes a shadow on the mat when he blocks the light of the flashlight. When you're outside, you make a shadow on the ground when you block the light from the Sun. In fact, anything that blocks a source of light can make a shadow!

To make a shadow, you need a source of light, an object to block the light, and a surface for the shadow to fall upon.

Shadows can be fun! Can you see the shadow goat in this picture? What shapes can you make by blocking light with your fingers?
