

Scenario 1, Part 1, Question 2

What parts of this discussion were most important to your group's decision making process?

Scenario 1, Part 2, Question 2

If you were going to pay the cost of this enhancement treatment, what factors would be important for your decision making process?

Scenario 2, Question 2

Who does your group think should be responsible for providing access to treatment for a person in the U.S. who needs and wants to use it but can't afford it?

Scenario 2, Question 3

How should whichever group(s) you chose in question 2 provide this access?

Scenario 3, Question 2

There are over 6,000 genetic diseases that are determined by a single gene. How does your group think it would affect society, both positively and negatively, if we could cure all of them using gene therapies?

Scenario 3, Question 3

In your group's opinion, where does making heritable changes to the human genome fall on the spectrum between just being the next step in medicine and being a fundamental change to what it means to be human?
