Monster Mask

Monster Mask

1

Make a mask.
Decide what you want your mask to look like.
You can add extra parts to the basic shape!
Use the markers to color it. Cut out the mask.

*What can you add to give the mask character?
How will we know whether your mask is
friendly or scary?*

2

Light it up!
Punch a hole where you'd like to put the bulb.
Thread the legs of the LED through the hole,
so the bulb is on the outside of the mask.

Turn the mask face down, so you're looking at
the back. Place a loop of tape onto the paper,
then bend the short leg of the LED onto the tape.

3

Place the battery onto the tape loop, negative side
down. Bend the long leg of the LED onto the top
of the battery. The bulb should light up. Tape the
top leg and battery down.

Tip: If the bulb doesn't light, check that the battery is positive
side up, and that the long leg of the LED is touching the + side.
